In first booking I give driver 3 rating so in past ride details page  
star will not so driver image and after that  
In second booking I make that driver as fav so in both booking  
details page star is showing on driver image

Hi,

I am Haresh, having 10+ years of experience in Software Testing Industry.

- Having unique blend of knowledge in Quality Product Delivery, Processes Management, Functional testing, Integration and regression testing, which help me to take the Quality of the software to the next level. .

- Hands on experience on testing Desktop, Web Based, Mobile application and Mainframe based application.

- Hands on experience on automation testing tools on selenium webdriver, jmeter, katalon, Appium, nodeJs, selenium with freamework etc..

- Thorough understanding of Product Delivery Life Cycle, Software Testing Life Cycle and Software Development Life Cycle.

- Well conversant with writing Test plan, Test Cases, Release Note and Product Health Report.

- Worked in various domains like Finance, Retail, Web Portals, Healthcare, ecommerce, CMS, TV and Setup box, Life Insurance, ERP system etc.

- I do have require mobile devices to test mobile view or applications like android and iOS applications.

- I have hands on experience with git,svn, postman, MSSQL Server.

- Kindly review my profile and let me know you view over the same.

Thanks.

Haresh

I have 10 years of experience into Software testing in desktop, mobile and web applications for different clients with domains. We have experience and certified testers of web services, very large and complex applications, as well as smaller and more simple websites. I also have automation, performance and mobile apps experience.

\*\*\*\*\*

What service will I provide you?

We will analyze the project and requirements and propose work methodology and deliverables.

I can provide you with:

- Web Services (WordPress, Custom Php, magneto)
- Manual Testing
- Automation testing using tools Selenium web driver, TestNG Framework, jmeter, katalon, puppeteer, API Testing
- Functional testing
- Performance testing using jmeter
- Regression testing
- Integration testing
- UI testing
- Cross-browser testing with real and emulative devices
- Exploratory testing
- Website testing
- Mobile Apps Testing
- Test Case/Plan & document creation
- Bug reporting & tracking

Our objective is to obtain a position where our experience can be utilized to improve software quality and customer satisfaction.

Hi This is Subham Choudhary u born and brought in Jharkhand I completed my graduation there its self and I have done my master from the Oxford college of science.  
After. That I joined driveu as a QA Software engineer I test all the new features added I the driveu app.i used to write test case for newly added features ,I read and understand documents as well as I cross verify the design changes.apart from this I used to do regression testing,intregation testing and end to end testing of newly added features.

cyberg Custom Warehouse Technology service to there client in which you first gather information about the costumer business according to there requirements you create a prototype model and show it to customer and if that prototype fulfil customer needs the the actual development starts where cyborg first analyst the document and after

that start design and coding after this testing process starts and if everything is good to go we launch the product .

## APi Testing Testing

=====

Q1>What is API Testing?

1>APi Stand for Appplication Programing Interface. It enables communication and data exchange between two separate software systems

Software development has three layers:

1>presentation layer (GUI Testing work here)

2>Busssiness layer (Application User Interface)

4>Database Layer (Database)

Q2>What to test in API Testing?

1>Return value based on input condition

2>Does not return structure

3>Modify certain resources

Q3>Type of api testing??

1>Usebility Testing(We test how much useable it is)

2>Security Testing(we check authentication and authorisation)

3>Automated Testing(we automate it)

4>Performance Testing(usually we check how how its work with GUI)

Q4>Types of Bugs that api testing??

1>Fails to handle error condition gracefully

2>Unused flags

3>Missing pr duplicate functionality

4>Relabbility issues.difficulty in connecting and getting response

5>Security issues

6>Multi threading issue

7>Performance issue . API response tie is very high

8>Improper errors/warning to caller

9>Incorrect handling of valid argument values

10>response data is not structured correctly(json or xml)

Q5>Tools for API Testing?

1>SOAPUI

2>Runscope

3>Postman with jetpacks

4>Postman with Newman

5>Curl

=====

Part 1

Building API test Suite in postman and running. It command line(NEwman)

=====

Postman is tool through which we can create as well as test our api.

QFor generating html test result from postman?

1>first export postman collection

2>install nodes

3>install newman

4>brew install newman  
5>newman run New.postman\_collection.json run the collection  
6>to create an html report newman run New.postman\_collection.json -r  
html

Q>Create Environment Variable in Postman??

1>Click on setting  
2>click on Add  
3>give variable name  
4>>add new variable name  
5>add url  
6>save  
7>select your environment  
8>get {{url}}/posts/1

Q>What is frisby.js??

Ans>Frisby.js is a easiest rest api testing framework it is made by  
Okta famous company which provided multi-auth for websites and it is  
open source.

Q>Where can be used frisby.js???

Ans>

1>Writing straightforward API test cases with response code  
verification.  
2>verify the response object(Actual Data) with the expected data  
with ease.  
3>Verify response that it has correct properties, values and types.  
4>frisby can be used to extend the assertions and customise it.  
5>promise based easy to use.  
6>frisby.js uses jasmine style assertion syntax and uses jest to run  
tests.

Subham Choudhary [3:41 PM]

1>in oneway prereview screen when user select car then the outline  
is hiding.(luxury/premium and hatchback)->Done

2>After creating booking when user navigate to main map current  
location icon not showing-Done

3>Onboarding text change->Done

4>IF user do not give permission and after that he search location  
and give permission so that time onboarding not showing.x`Done

5>Return Trip Dialog for oneway booking not coming

6>schedule my drive option not coming when driver not accept booking  
7

Q>What is Rest Assured?

REST Assured is a Java DSL, or Domain-Specific Language, that allows you to write powerful, readable, and maintainable tests in Java for your RESTful APIs. Your REST Assured tests run on top of existing unit testing frameworks like JUnit or TestNG.

- 1>App Opened
- 2>Get User Location
- 3>Select Trip Type
- 4>Set pick Location
- 5>Select pickup and drop loction
- 6>First review started
  - a>pickup and drop location page

  - c>Shine
  - d>more
- 12>More Items clicked

## GIT NOTES

Distributed Version Control Systems

This is where Distributed Version Control Systems (DVCSs) step in.

In a DVCS (such as Git, Mercurial, Bazaar or Darcs), clients don't just check out the latest snapshot of the files; rather, they fully mirror the repository, including its full history. Thus, if any server dies, and these systems were collaborating via that server, any of the client repositories can be copied back up to the server to restore it. Every clone is really a full backup of all the data.

```
git --version
```

```
git config --global user.name subham
git config --global user.email subham@gmail.com
git config user.name
```

Create folder

```
Git init
```

```
Create file index.html
It is in modified state
```

```
Git status
```

it will tell the status of the file(if file coloraturas is green then it is added and ready to commit ad if it is orange then it modified)

```
Git add index.html
it will add file in staging area
```

```
Git add .
it will add all modified file
```

```
git commit -m "Added index and first html file" it will commit
all the changes
```

```
Git log
it will tell about all the commits made
```

```
Git log --oneline
it will tell about same thing of the above commands
```

```
Git branch FirstBranch
it will create a branch with name FirstBranch
```

```
Git branch -a
it will show all the branch available
```

```
Git checkout FirstBranch it will
```

switched to this branch

```
Git branch -D FirstBranch           it will
delete this branch if its not merged with master
```

```
Git branch -d FirstBranch           it will
delete this branch if its merged with master
```

```
Git checkout -b FirstBranch1
it will create as well as checkout the branch
```

When you want to merge a branch then you have to be that branch  
Example if I want to merge branch A into branch master then I have  
to checkout to master branch

Git merge FirstBranch1  
for merging a branch to another, always keep there in master branch  
whenever merge

There two method to create repo first is create in local computer and push in GitHub and second create repo in github and clone it in local

```
git remote add origin https://github.com/SubhamDrive/LearnGit.git
```

this will make origin as the repository name we do not have to copy paste the link all the time

```
git push origin master
```

This will push the code to the remote directory

```
git push origin BranchName
```

Whatever branch we want to push we have to give its name

## SECOND METHOD

```
git clone https://github.com/SubhamDrive/PythonCode.git
```

Cd into the file

```
git add .
```

```
git commit -m "Added First.py "
```

```
git remote -v
```

```
git push origin master
```

```
git pull origin master
```

```
git checkout -b index-html
```

```
git push origin index-html
```

Summary screen

Active rides

Past rides

There is loader in oneway preview screen

When selection Destination in oneway in search screen then in pre review screen destination field is empty

MainMap Screen

Pre-review Screen

1>In Oneway search screen when user select destination location, then in pre-review screen destination field is empty.

2>

Main Map Screen:

- \* There is an extra space between Tab Bar & choose your trip type this happens when you come back from Search Screen to Main Map Screen.
- \* There is a loader on the blue location pointer which keeps loading in Main Map Screen, This Happens when you come back from Search Screen to Main Map Screen.
- \* Update the user location to current location in Main Map Screen, When the user comes back to Main Map Screen from the search screen.

Search Screen:

- \* When Recent Locations are empty means don't display Recent Location icons
- \* Heart icon should be displayed for Other Favorites
- \* Choose on map should not be displayed when Autocomplete Search Results are Displayed
- \* Clear the Autocomplete results when the selected location is not serviceable

Round Trip Search Screen:

- \* Clicking on Next Arrow Button it is not taking the user to Pre-Review Screen
- \* After selecting the location from choose on map, it is not taking the user to Pre-Review Screen

One Way Search Screen:

- \* Clear the drop location cache when the user come back to main map screen

- \* First two Autocomplete results are hidden in drop location.
- \* Drop Location: Cross mark should be displayed only after entering the location

#### Outstation Search Screen:

- \* Always the focus should be pickup location

#### Outstation oneway Search Screen:

- 1> if I clear pickup location by clicking on cross button then there is a white space coming.
- 2> When I search for pickup location then choose on map option is coming above the search list
- 3> First two drop location is hidden in location list.
- 4> App Crash when I enter second time non serviceable area location in pickup field

#### Outstation roundtrip

4>

#### \*\*OneWay PreReview Screen

- 1> In Oneway search screen when user select destination location, then in pre-review screen destination field is empty and if user click on schedule its navigating to next step.
- 2> In Car Type Dialog, Use the same font size for "Luxury/Premium" also
- 3> "Choose your Car and gear type" changed to "Choose your gear and car type "
- 4> There is a loader under blue location pointer which keeps loading in Main Map Screen..
- 5> In Pickup and Drop location search page there is an extra space on top.
- 6> In Pickup and Drop location search page pointer is not showing on textbox when we clear location by clicking on cross button.
- 7> In Pickup and Drop location search page when i click on cross button then only recent location is showing.
- 8> In Drop location search page when user edit destination location and select address from saved location or recent search then its changing pickup location.

#### \*\*RoundTrip PreReview Screen

- 1> There is a loader under blue location pointer which keeps loading in Main Map Screen
- 2> "Choose your Car and gear type" changed to "Choose your gear and car type "
- 3> In Car Type Dialog, Use the same font size for "Luxury/Premium" also

## **\*\*OutStation PreReview Screen**

- 1>There is a loader under blue location pointer which keeps loading in Main Map Screen
- 2>Choose your Car and gear type" changed to "Choose your gear and car type "
- 3>In Car Type Dialog, Use the same font size for "Luxury/Premium" also

## **IOS BUGS**

=====

- 1> Past Ride in view details page new help question not coming
- 1> In Preview screen. Tick mark on luxury/premium misplaced and also the black outline is hiding the letter "L"
- 2> Polyline is not showing on Oneway pre review screen when first time user give non serviceable location in destination field and after that user give serviceable area

## **Android Bugs**

=====

- 1>when I click on keep browsing button its navigating to mainmap
- 1>when I click on Buy More Services button its navigating to mainmap

## **Shine1.0:**

Offers are not displayed in Shine Home Screen

### **Main Map Screen:**

Update the user location to the current location in Main Map Screen, When the user comes back to Main Map Screen from the search screen or Pre-Review Screen

### **Search Screen:**

APP CRASH -> In oneway search screen when user enter non-serviceable area in destination field and after that click on cross button to clear text

### **One Way Search Screen:**

When user select destination location using chose on map

option then in pre-review screen only destination location is coming

Pre-Review Screen:

Pickup Address bar is hidden in Pre-Review Screen for Round Trip Booking

Heart Icon is Showing with the locations name in search list

Help Bug

PolyLine Not showing on preview screen when select destination location from search list in oneway booking.

Test all the bugs reported by reddy and trollo

And practice python

Outstation oneway Search Screen:

When I enter non serviceable manually then drop location field is hiding

App Crash-

Steps-select oneway->click on destination field->select choose on map->select location->click back button in pre review screen->then in main map click on outstation button

App crash when user click back button from pre review screen to main map

Main Map Screen:

Update the user location to the current location in Main Map Screen, When the user comes back to Main Map Screen from the search screen or Pre-Review Screen

OneWay Booking PreReview screen

1>In Pickup location search page if user click on cross button to clear the pickup address and select location from saved location its not working.

2>In Pickup location search page if user click on cross button to clear the pickup address and select location using choose on map then not able to select.

3>In Pickup location search page if user select choose on map option come back to pre review screen then Two arrow(back button) button is showing on top.

Outstation oneway pre-review screen

1>if I set pickup location Bangalore and drop location mysuru and in pre review screen I change pickup location to Delhi it working

Outstation roundtrip

1>when I select destination location using choose on map then it showing service not available

GIT Commands

=====

1.>git status

2>git init

it will initlize

3>git add .

it will add all untracked files

4>git commit -m "Remove last line"  
changes

it will save the

5>git push -u origin master

push the code on particular branch

it will

6>git branch demo

It will create a branch

7>git checkout demo

switched to that branch

it will

8>git puch -u origin master

9>git remote add origin https://github.com/subhamgitprofile/  
BTRE\_PROJECT.git

10>git remote set-url origin http://github.com/  
subhamgitprofile@github.com/subhamgitprofile/BTRE\_PROJECT.git

```
11>git push -u origin master
```

```
12>git status
```

```
13>;
```

```

#### Responsibilities

- Responsible for the overall QA life cycle of the solution and manage complex projects with significant bottom line impact
- Work with dev managers and product managers in developing a strategy and road map to provide compelling capabilities for the seller community on amazon.in marketplace that helps them succeed in their business goals.
- Instill best practices for software development and documentation, assure designs meet requirements, and deliver high-quality work on tight schedules.
- Project management – prioritization, planning of projects and features, Stakeholder management and tracking of external commitments
- Operational Excellence – monitoring & operation of production services

#### BASIC QUALIFICATIONS

- Bachelor's degree and/or Master's degree in Computer Science or equivalent
- Strong knowledge of QA methodology and tools
- Ability to understand technical specifications and analyze log file
- Competency in at least one modern programming language such as Java, C# or C++
- Comfortable communicating cross-functionally and across management levels in formal and informal settings
- Strong organizational skills, tracking multiple test executions simultaneously and be able to synthesize the results
- Shows creativity and initiative to improve product coverage and effectiveness.

#### PREFERRED QUALIFICATIONS

- Fluency in at least one modern programming language such as C, C++, Java, C#, or PERL.
- Experience with testing methodologies for server class services, including latency and load testing.
- Knowledge of professional software engineering practices & best practices for the full software development life cycle
- Experience with test automation tools, schedulers, frameworks, and harnesses.
- Proven experience in measuring and reporting quality and driving improvements across teams via consensus.
- Ability to understand functional/technical specifications and analyze data and server logs.
- Excellent oral and written communication skills.

- Understanding the scope of different types of testing: unit, integration, functional and regression tests
- Familiarity with Java unit testing frameworks
- Experience testing both web applications and back end services, including functional API testing, integration testing, and UI functionality and usability testing
- Experience communicating with users, other technical teams, and management to collect requirements, describe software product features and technical designs
- Experience with quality metrics and clear status reporting

- Pip install psycopg2
- Pip install psycopg2-binary
- Brew install postgres
- Brew service start Postgres
- ./manage.py makemigrations
- ./manage.py migrate
- ./manage.py dbshell
